

Test Case ID	🔗 Test Type	Test Scenario	Test Case	Pre Conditions	Test Step	Input Data	Expected Result	Actual Results	🔗 Pass/Fail
Example	Expected	Add Item Button Functionality	Check output of item on treeview proceeded by button press	Entry widget must have a input	1. Open Window 2. Navigate to interactive widgets 3. Input a task that would like to be completed in entry 4. Press the Add Item Button	- Do the laundry	Display "Do the laundry" in the treeview widget	Displayed the "Do the laundry" task in the treeview widget	Pass
1	Expected	New Player Rig	Check if new player 3d render from blender is imported in Godot	Blender Import Support	1. Open Window	Host Join	Player will have a new character mesh render that ressembles a cat like player character	Player Mesh did not properly instantiate onto Godot Interface	Fail
2	Expected	Player Outline	Check if new player 3d render has an outline	Shader Import	1. Open Window 2. Press Host Button	Host Join	Player will have another mesh instance on top of the original	Player Mesh did not apply the shader correctly however was inverted	Fail
3	Expected	Player Outline	Check if player render has x-ray outline	Shader Import	1. Open Window 2. Press Host Button	Host Join	Player will have another mesh instance on top of the original showing player render through other objects	Correctly showed a coloured silhouette of the player through objects	Pass
4	Expected	Mouse Outline Decal	Check if decal shows a new black outline	Mouse on Viewport	1. Open Window 2. Press Host Button	Host Join	Mouse cursor will have a black outline	Correctly made canvas change	Pass
5	Expected	Player Animations	Check if player size oscillates during sine constant	Player Instantiated	1. Open Window 2. Press Host Button	Host Join	Player's relative y size will oscillate creating a bobbing effect	Successfully performed animation	Pass
6	Expected	Player Animations	Check if player rotation oscillates during sine constant	Player Instantiated	1. Open Window 2. Press Host Button	Host Join	Player's local z rotation oscillates creating a swaying effect	Successfully performed animation	Pass
7	Expected	Player Animations	Check if player increases sine constant when moving input is used	Player Instantiated	1. Open Window 2. Press Host Button 3. Input WASD Controls	WASD Controls	Increases Player's local z rotation oscillates creating a swaying effect	Successfully performed animation	Pass
8	Expected	Player Outline Synchronisation	Check if player rotation and size oscillations are synchronised	Players Instantiated	1. Open Window 2. Press Host Button 3. Press Client Button (New Window)	Host Join Client Join	Shows idle animation on all clients	Successfully performed animation	Pass
9	Expected	Player Outline Synchronisation	Check if player input increasing sine constant is relative to all clients	Players Instantiated	1. Open Window 2. Press Host Button 3. Press Client Button (New Window) 4. Input WASD Controls	Host Join Client Join WASD Controls	Shows change in sine constant to all clients through walking animation	Successfully performed animation	Pass
10	Expected	Player Outline Synchronisation	Check once first player joins the outline colour matches player priority	Players Instantiated	1. Open Window 2. Press Host Button 3. Press Client Button (New Window)	Host Join Client Join	Player outline will match the designated colour orientation on all clients	Failed to properly synchronise these changes	Fail
11	Expected	Map 1 (Forest Map) Importation	Check that importing a blend file will upload to the game scene	Game Scene Opened	1. Open Window 2. Load Map 1	Open Window	Map 1 will be instantiated to world scene	Successfully imported blend file to Godot Scene	Pass
12	Expected	Map 1 (Forest Map) Importation	Check that importing a glb file will upload to game scene	Game Scene Opened	1. Open Window 2. Load Map 1	Open Window	Map 1 will be instantiated to world scene	Successfully imported glb file to Godot Scene	Pass
13	Expected	Map 2 (Yarn Ball Map) Importation	Check that importing a glb file will upload to game scene	Game Scene Opened	1. Open Window 2. Load Map 2	Open Window	Map 2 will be instantiated to world scene	Successfully imported glb file to Godot Scene	Pass

14	Expected	Map 3 (Sandy Shores Map) Importation	Check that importing a glb file will upload to game scene	Game Scene Opened	1. Open Window 2. Load Map 3	Open Window	Map 3 will be instantiated to world scene	Successfully imported glb file to Godot Scene	Pass
15	Expected	Map 3 (Sandy Shores Map) Importation	Check that assigning a sine function to the wave baseplate will cause it to oscillate	Game Scene Opened	1. Open Window 2. Load Map 3 3. Press Host Button	Host Join	Map 3 oscillating water will become apparent	Successfully performed animation	Pass
16	Expected	Map 1 (Forest Map) re-importation	Check that Collision meshes are imported	Game Scene Opened	1. Open Window 2. Load Map 1	Open Window	Custom Godot Map 1 will be instantiated to world scene	Successfully Registered correct collisions meshes	Pass
17	Expected	Map 2 (Yarn Ball Map) re-importation	Check that Collision meshes are imported	Game Scene Opened	1. Open Window 2. Load Map 2	Open Window	Custom Godot Map 2 will be instantiated to world scene	Successfully Registered correct collisions meshes	Pass
18	Expected	Map 3 (Sandy Shores Map) re-importation	Check that Collision meshes are imported	Game Scene Opened	1. Open Window 2. Load Map 3	Open Window	Custom Godot Map 3 will be instantiated to world scene	Bridge Mesh collisions hitboxes were not imported properly	Fail
19	Expected	NetFox / Noray Functionality Multiplayer Testing	Check that Host creates local server	Host Client Online	1. Open Window 2. Press Host Button	Press Host Button	Host Instance Will instantiate a new World	Successfully created new world	Pass
20	Expected	NetFox / Noray Functionality Multiplayer Testing	Check that Client Connects to Host Server	Host Client Online	1. Open Window 2x 2. Press Host Button 3. Press Client Button	Host Join Client Join	Client Will Connect to Hosted Server	Failed to connect to Hosted Server	Fail
21	Expected	NetFox / Noray Functionality Multiplayer Testing	Check that Connection works over without local connection	Host Client Online	1. Open Window 2x 2. Press Host Button 3. Press Client Button 4. Perform Stages On Two Computers	Host Join Client Join	Client will join the Hosted Server	Failed to work over a internet connection	Fail
22	Expected	Node Tunnel Multiplayer Testing	Check that Host creates local server	Host Client Online	1. Open Window 2. Press Host Button	Press Host Button	Host Instance Will instantiate a new World	Failed to create a hosted client	Fail
23	Expected	Photon Engine Multiplayer Testing	Check that server is created on Photon Network	Host Client Online	1. Open Window 2. Press Host Button	Press Host Button	Host Instance Will instantiate a new World	Successfully created new world	Pass
24	Expected	Photon Engine Multiplayer Testing	Check that Client Connects to Host Server	Photon Engine Multiplayer Network is Active	1. Open Window 2x 2. Press Host Button 3. Press Client Button	Host Join Client Join	Client Will Connect to Hosted Server	Successfully connected to server	Pass
25	Expected	Photon Engine Multiplayer Testing	Check that Connection works over without internet connection	Photon Engine Multiplayer Network is Active	1. Open Window 2x 2. Press Host Button 3. Press Client Button 4. Perform Stages On Two Computers	Host Join Client Join	Client will join the Hosted Server	Failed to work over a internet connection	Fail
26	Expected	Tube Multiplayer Testing	Check that Host creates local server	Host Client Online	1. Open Window 2. Press Host Button	Press Host Button	Host Instance Will instantiate a new World	Successfully created new world	Pass
27	Expected	Tube Multiplayer Testing	Check that Client Connects to Host Server	Host Client Online	1. Open Window 2x 2. Press Host Button 3. Press Client Button	Host Join Client Join	Client Will Connect to Hosted Server	Successfully connected to server through network code	Pass
28	Expected	Tube Multiplayer Testing	Check that Connection works over without internet connection	Host Client Online	1. Open Window 2x 2. Press Host Button 3. Press Client Button 4. Perform Stages On Two Computers	Host Join Client Join	Client will join the Hosted Server	Successfully Joined Host Client through Join Code on Tube	Pass
29	Expected	Player Cat Decal Randomisation	Check that Player Mesh Colour Randomises	Player Instantiated	1. Open Window 2x 2. Press Host Button 3. Press Client Button 4. Perform Stages On Two Computers	Host Join Client Join	Cat Player Mesh will change colour upon joining through a random pool of colours	Mesh did not properly inherit the colour instance that was given	Fail
30	Expected, Invalid	Player Cat Decal Randomisation	Check that Mesh Shader X-Ray Works	Player Instantiated	1. Open Window 2x 2. Press Host Button 3. Press Client Button 4. Perform Stages On Two Computers	Host Join Client Join	Cat Player denunciation of priority and x ray shader correlate on join for both clients	X-Ray was not visible for the second client	Fail

31	Expected, Invalid	Player Cat Decal Randomisation	Check that Mesh Shader Outline Works	Player Instantiated	1. Open Window 2x 2. Press Host Button 3. Press Client Button 4. Perform Stages On Two Computers	Host Join Client Join	Cat Player denunciation of priority and outline shader correlate on join for both clients	Outline was not visible for second client and Host client had matching colours for both clients	Fail
32	Expected	Forest Map Retest	Check that collisions with random rock are created	Player Instantiated	1. Open Window 2. Press Host Button	Host Join	Create Collision mesh that properly conforms to the shape of the rock	Successfully created collision mesh	Pass
33	Expected	Retest Mouse Cursor after Network Change	Check that Mouse Cursor follows and recolours to the correct client	Window Opened	1. Open Window 2. Press Host Button	Create Host	Mouse Cursor should modify its location relative to the user's mouse location with its correct multiplayer authority colours "blue = 1, green = 2, etc"	Did not change colour nor adhere to the mouse cursor for the according authority	Fail
34	Expected	New png Assets	Check that the new character icons initialise	At least 2 windows opened	1. Open Window 2x 2. Press Play Button on Host Client	Play Button	Character player profile pictures should instantiate in the top right replacing the old colour rectangles	Successfully replaced the old colour rectangle nodes	Pass
35	Expected	New png Assets	Check that the new Player Cards initialise	Game Phase has begun to modifiers selection	1. Open Window 2x 2. Press Play Button on Host Client	Host Join Client Join	New png for card modifier elements should replace to the new pictures	Successfully changed the png card modifier decals according to the dictionary references of the png files in the repository	Pass
36	Expected	New png Assets	Check that the player cards outline when hovered upon shows and disappears	Game Phase has begun to modifiers selection	1. Open Window 2x 2. Press Play Button on Host Client 3. Hover mouse cursor over modifier card outlines	Mouse Cursor interaction	Card outline should hide on default but should appear when the mouse cursor has entered the frame	Card outline did not correctly align	Fail
37	Expected, Invalid	New png Assets	Check that player icons are correct when testing who picked a card linked to all clients	Game Phase has begun to modifiers selection	1. Open Window 2 - 4x 2. Press Play Button on Host Client 3. Wait for game timer 4. Select a new modifier on any client	Mouse Cursor interaction	Players that have picked their cards should appear with a tick next to their profile icon to dictate that they have recieved a new modifier	Correctly applied the tick indicator across all clients simultaneously	Pass
38	Expected	Retest Player Randomisation Location Spawning	Check that Player locations upon level instantiation are random	Game Started by host	1. Open Window 2 - 4x 2. Press Play Button on Host Client	Mouse Cursor interaction	Players should randomise their location between 4 possible options which would vary between different clients	Players that were not the hosting server did not change their locations	Fail
39	Expected, Invalid	Retest Scoreboard Functionality	Check that the scoreboard ads points to the corresponding player that gets an elimination	Game Started by host	1. Open Window 2 - 4x 2. Press Play Button on Host Client 3. Wait for game timer 4. Use shoot controls at other client parties	Mouse Cursor interaction	Scoreboard should apply increase of score to respective elim victor	Successfully applied scores to corresponding victors of eliminations	Pass
